

TP Onsite - Specialist & Confidential Recruiters Interview Transcript x3 - 2 Dec 2025

be taking notes.

Okay, there we go.

H I just shared with you Robert the document as well just on Slack that Amanda shared for note taking taking that one.

Perfect. Thanks. So um so so great you know thank thank you so much again for your uh for your time. Um I suppose we will just direct first of all some introductory questions just to understand more about your your role and we do this in a in a round table format. Um so yeah maybe uh yourself first. Could you tell me a bit about your your role? What does your day-to-day look like?

Sure. So, I'm working here as a recruitment manager

and uh my day-to-day routine is like sourcing the candidates, aligning their interviews, passing their resume if they selected and processing for offers and followup. So, these are the day-to-day activities with the candidate. Apart from that, of course, I being the manager, I need to maintain the attendance for my team. So,

so I use day for attendance and all. So, it's the dayto-day activity.

Okay.

Okay.

Cool. So, it sounds like sourcing, processing, offers, but you also you also manage a a team as well. How big is your team?

Uh, three members.

Three members. Okay. And are they um are they like uh kind of frontline recruiters or what what's

Yeah, they are specialized

specialized recruiters. Okay.

They're all internal to TP. You don't They're not external. Okay. And from a manager perspective, um what like what are your roles and responsibilities as a manager to them? The performance reviews etc.

Okay.

Their performance setting their goals and uh their performance how they working set the agenda for day-to-day basis also and BT reviews.

Yes.

Okay. So quite varied relevant responsibilities. Okay, that's that's um maybe for yourself then is it similar maybe what what does your dayto-day look like?

So my day is a little bit different while I'm also recruitment manager with specialized uh team. I actually am responsible for creating job acquisitions.

Um so that is one of my bigger uh work with um apart of that I'm also responsible for the onboarding bit of the candidates. So uh post that join in the onboarding command that do um the push them to payroll um in or marking them as a no show is not you know actually joining that part of that is my part yeah

I don't really actually release offers

okay

uh but candidate engagement is where I come in as well as the places position part

plus of course I have a team of people so they're not very managed

how big is your team

um 60

can I ask um who creates the position if you're doing the requisition do you create them at the same time or is the position already created before the requisition

on the emails we have approvals on emails it's not happening on right now

and then once I have all of these approvals

uh is when I raise a job requiring managers okay

where are the positions created then just through email

okay Yes, I'm creating them on work day as a job. I'm raising them on work day as a job requisition but on email they come to us for example we want to hire a product manager for this team this is my budget.

So we have created a unique unique code for all the positions.

Okay.

So we map each one position with the code and we send to that

and you use um evergreen rats or is it uh Is it regular

regular specializ? Okay, perfect. Uh, no, that's great. I think it just gives me like idea in terms of maybe which critical users to user journeys to to focus on. So maybe more around Java creation maybe a little bit more around offers and you know some some of your uh responsibilities. Now that makes sense and maybe if it gives us an what is what does your day look like?

So um I would take last eight months. So I have that foundations from uh HR industry work day like um and I am a part of the leadership hiring uh team. We manage all the confidential job recognitions and our VA starts from creating the job acquisition right uh to the offer stage and uh this has been taken care by every individual whosoever has been assigned to that particular position. So as Simi mentioned everything for now is going off time right work day is just a tool for us wherein we open the requisition and it is helping us to release the offers there is no other potential thing which we are basically are not able to pull out from work day is just like we are opening the position we are getting the candidates applying on that position right and then we are rolling out the offers we not able to pull any reports from there right uh there is no view on the reports in case we can download any excel to see that how our dashboard looks Or say for example if I have a team around me right if I want to look about that what is the progress on their positions and everything that we are not able to do currently right so that is one second as I mentioned the major pain point the first priority if we can we can work around it is um having the approvals through work as there has to be a proper cancel wherein the hiring managers are approving the positions on work day itself right and then we have to approve at place that is when we are telling them that this is the candidate right and when we are just done with the all the entire review of the offer letter and everything is done then that offer letter has to go through one upline as in for the leadership whatever I'm talking is for the leadership recruitment team right their process might look different from how we are working right so it should go to either to the hiring manager and if not to the hiring manager at least one up right and that person should be approving a uh of the compensation right

and everything has to be at one place which is work based for now as I mentioned all the approvals whether it's the compensation approval the position approval we are taking it offline and then we are enclosing it as the documents before rolling out offers to the candidates so there is option where we can enclose the documents right where we can attach the documents before we roll out the offers

yeah um who who determines the the the need for a new position So it comes from the hiring managers after a layer of multiple approvals right um the approvals so two types of approvals are being obtained here one is the global approval and the second is the India CHR approval or whoever is the excom within the organization

this is all done offline so basically manager says you know I need a headcount let me let me reach out to somebody to get the approval budget etc all done through emails and then again then send it to to you to recruit for. Okay. So

it's actually others usually hiring manager raises the requisition in the portal then H or whatever the business head has to approve the requisition then it came to us in manager.

Okay heard that.

Yeah heard I want to I want to start already but I can't.

So it sounds like in maybe previous experience of the hiring manager that that raised the the requisition. How is how does that in pair with the the way it works at the moment when it goes has that manual process it goes to the recruiter what what type of friction points are there at the moment uh with with that type of process

we are getting requisitions over the email from hiring managers and then we'll ask certain approvals like business head or CHR approval then we will get again over the email we'll ask we'll generate one unique code then ask them whe they to raise the JR so this is the process manual Okay also is that you know as a recruiter the job here is that oh we need this skill set uh we need to hire this skill set okay but right now what is happening the friction that is this process is causing is that you also need to know things like costs or loss which are not really recruitment terms or jobs that you know we need to know

right and there are a lot of friction that happens on oh this is wrong tagged on a wrong lo or this is tagged on a wrong um uh company because well we don't know that right we've been raising it to the best of our knowledge but if the hiring managers or people from their team were to date with themselves they would know those details and it would be easier and faster right now there's a lot of back and forth that

please confirm that and that and that so that we can raise the JS

and so many position outsource so we are working for our clients so if the position raised bases on the client so we will let know that I mean what's the budget what's the cost for what's the margin everything Okay,

we needed models.

Okay,

so that that sounds like maybe that's that causes a bit of back and forth in terms of things like cost. Um and ideally that would all be within the system and um maybe the hiring manager would raise it themselves.

They they they would have a better clarity, right? And they would have a control over it. So I I'll give you a fair example, right? I have one of senior director joining us next week, right? 9th of December. So it took me almost 24 hours to your tables to sort on the line of business and the cost center because hiring manager himself was not aware of that this person should be tagged into what category what cost center and what line of businesses right then you'll have to do so many like permutations and combinations to see that where is that fitting in so what we trying to say is that if in case that is already sorted at the first place then you'll be saving a lot of time right in holding out the offers got

right so because see every candidate comes with a different uh uh wins and fancies, right? You might be holding an offer, you could be immediate joiner and you want the offer to be out within 24 hours and at that

uh is actually 24 hours to 48 hours to release the offers on we have fin once we have a final approval.

Okay.

Right. Usually we do it for in within within 4 hours of time but on papers as per the SOP such as it has to be out within 24 to 48 hours. So that was something which I was not able to meet my dad right only because of these So yes, so the point is that if in case the recus is getting opened by the hiring managers, we are sorted at the first place that there's not too much of back and forth which we are doing in terms of struggling that what should be the cost center what line of businesses right whom this person is to be aligned with because

if in case we have one BU head right so for an example Sami is the business uh unit head for us right and then I am reporting to her she's reporting to work right then what will happen is all of us will have different different cost centers or a probability of having different line of businesses as well. So for now what we are doing is we are just going to the hiring manager whoever is the reporting manager precisely got

we are copy pasting the uh cost center and line of business of that particular person right the person will be aligned or is about to be offered right

yeah

and that is when we get to know from one upline that would mean This was not the cost center for this business, right? I'll have two different cost center. One of my vice president will come under this cost center and the second one will come under this cost center.

Right. Then we again have to go back to the requisition. We have to edit the requisition and we have to get the candidate applying on that requisition again.

Yeah. Okay.

Right. So we have to start from the scratch. So having the hiring manager working the requisitions will solve a lot of uh for us

and there's Yeah. Yeah. Um uh what was my question? Um yeah uh you said about the cost scenarios line managers. Oh um the compensation piece um so when you when you open a requisition are you um given sort of a guideline like a range for that particular and then if you so there and is there any is there any approval if you hire somebody within that those guidelines?

If you go outside of the guidelines

there is no special approval require. Okay. But

yes, there is certain approval channel we have.

Yeah. So if you if I get a grade of saying who can hire between 12 to 15, right, LP and I hire them I link an offer between that then it's all good. If I hire somebody above that if my offer is going to be 70 80

then they'll go they'll go for approval.

Okay. Yeah. Or maybe additional bonuses.

Both will need approval. Then they will not pass.

Yeah. And secondly uh there should be some mechanism for aging tracking because once the requisition rates so we can track nowadays we are tracking manually with formula in Excel

okay

yeah so how old is the requisition

okay

what's the dad where we are behind so these are the points

so the the track the metrics around the the job rep how how long is it open and do you have like SLAs uh for for roles as well to meet like do you have to track behind its SLA things like that.

Yes.

We right now have for example my team does that data analytics part right? Yeah sure thank you.

Hey uh I was called to meet S. I'm from training team.

Okay.

I'm not sure if he's I think he's inside.

Okay.

Yes.

Sorry. Yeah. We were talking about sorry we were saying that's what my team does. We have we have exc team which tracks all the metrics for the recruitment team at the job position that how cold is it? What are the business requirement dates when the opport

what are the sources we're using all that metrics that recruitment that tracks recruitment performance

are right now being done

manually on excess right

and how um just roughly like in terms of your day like what percentage of your time do you do you spend tracking

one person who does only that

of their full time does. Okay. Yeah, that makes sense.

Okay.

A lot of back and forth that happens. There are five recruitment managers in the team. We need to connect with all of them, take updates on their positions, what are the offer statuses.

Where are they stuck? What is happening there? If it's all work, then they just need to come with that report, right? Okay.

Right. Now, that's all that is is full-time job. That's all he does.

Okay.

Right.

And is that um is that uh spreadsheet used to track approval? Like how do you keep track of approval? Um is that through email? Is it true sheet?

Email we so the process we follow is that every position we give a quote by ourselves in the position and then there are forums where we add oh who approved this when did we get that email and we attach that email link

so that later on because 6 months down the line somebody's going to ask us who approved this position. So we need to know right and tracking emails finding it in emails is very difficult.

There are links to it who gave it what date and all that. Okay.

But it's all manual and that's why like it takes better part of the whole day to maintain that sheet.

Wait, which code is it? The job code. What?

It's a unique code. We are managing.

Yeah. Just just for our internal team,

right? Because if I say, oh, I need status on it 234.

So she knows what position I'm talking about.

Okay.

Because it's an internal code. Um otherwise it's very difficult to track of the same position. Wow.

Okay.

Um I was curious for because I know you mentioned you take a confidential um

oh you know no worries. I was just curious were there any variances uh for confidential directs in

that process is it is it the same or in terms of uh reporting on you know gathering metrics around the

you know aging and also tracking approvals is is the process the same for that at the moment it's quite manual.

Um so see so far I've heard from her uh the essays for sure would be different right in terms of uh in terms of the recruit the recruiter's performance

yeah

uh that's one and we are also tracking that uh manually right in terms of that day one is when the position is being assigned and now it's day 30th the position is still open so turnar around time is something what we is is one of the part of the s of KPI is that we have diversity profile there are multiple things attached particular ATS right so we are doing that manually and then we have another ATS which is uh Thrive

Mhm.

right so um Thrive is the one from where we can pull the reports right thrive gives us a better clarity in terms of what my recruiters are currently sitting at the number of positions that shows us a proper dashboard

um of of any individual and to me I can uh view my uh team members dashboard as well then see the status right in terms of how many profiles are there what is the status for that profile right what is the turnar around time for that particular position since how long aging to be precise right what's the aging for that position

right these are the certain things I can get from

but in terms of currently if you talk about work doesn't give us that option

okay okay

so as I mentioned yeah please

so um is thrive around only because um you're not fully live on work day out. Do you know that?

Yeah, we integrated I think yet completely on work day, right? So, Thrive allows us a lot of features. I think thrive has only been used by the uh leadership hiring team, right? So, thrives gives us a lot of features which workday I don't know the potential about workday right but we don't have those things. So, the the number one thing for any recruiter is to parse the profiles right pull CVS from any of the job It could be either no it could be either LinkedIn right so these are the two channels external channels through which we source and the third is the agency channel but agency is something wherein uh agency guys can upload profiles on workplace so that is doable for us but in terms of uh me particularly right individually working on any of the position I cannot parse CVs from no or from LinkedIn to work day

so parsing is not there I would like to there is of parsing resume or bulk uploads. We are not getting that option that we can upload by ourselves recruiter we have to ask candidates to register their on the particular ID or maybe asking for referrals. So there should be an option

for recruiters who pass the resume or to upload the resume against particular requisition and tell you what he's trying to say is now say for an example we have created one of the job requisitions by doing all that jazz at the back end. approvals offline, right?

Um then uh when we create the position, right? So we have to create a link an external link for that region and that uh link has to be sent to uh the candidate wherein the candidate registers himself or herself right that is where we can see the profile on work day right

and see I'm a part of the leadership team but I can understand for for them there would be multiple profiles right and it it really comes a task to like keep sharing those links with multiple people right so we should have an option of bulk uploading of series or at least parsing the CVS right either through no or through LinkedIn whatever channel is a series if there's something

is under our control you can ask them to this is the link and whatsoever candidates you're sharing with us just ask them to upload or register themselves particular uh job ID right okay but otherwise as an individual a part of the corporate team have an option of parsing the profiles as well and the problem that this is creating especially for us as she said we have 800 900 open position

creating job for all of them then posting them externally so if you if you are at TP India career page there are I don't know n number of open positions which are not actually open because we have already identified the candidate for that we're just posting it online so that we can get that link which we can send to the candidate who can then register as us Right. So you have like 800 900 position that are on PP career page which are not actually open because they already have candidates there.

Okay. So you just use

for you right you have to claim that once a position is because I see that when offer is accepted by any of the candidate the job says that it is completed right.

So I need to understand from you guys that once the stage is up updated as completed on work day does the position autom automatically gets closed on the external sites which are there.

That's an option of job posting, right? But I need to understand that uh does that uh gets as in greeted from the career sites or from the external post?

Yeah, there is a there's a condition where you can set up BB to unpost the the job on the on the career side. So that would be something you configure um to do that. I I'd imagine with that many position and you get a lot of so I have a position for cyber security intern

but I still have about 700

applications on that that and also can't review those applications in one I have to open if I say want to hire another one and I say oh I have 700 I can distribute

yes

I can't I have to open each one separately open it for each person

yeah

which is which is actually I'm using workday for sourcing of Yeah, because people are applying on the job posting. So I used to do it but there is there should be one uh mandate column to pass the resume because sometime I found out that candidate has not uploaded the resume. So how can I review that?

Yes. So

okay

that would you know

so to make that a required field for for the

there has to be some filtration done before the profile comes to us and if in case we have a option of customizing that

then nothing like it as in And for any job, he or she must have to upload the resume. So there would be one of the

high configurable.

That makes sense.

I was just curious as well on the the current resume because that's actually something we're we're you know investigating at the moment particularly for um non-English languages the effectiveness of the the current resume parser. Um so would you like you know you're obviously uh you know probably recruiting or getting candidates uh with non-English as their their your first language. How how do you find the current resume parser at the moment in terms of accuracy of of what it parses?

Uh not 100% accuracy but yes sometime it's 60 70%.

Okay. Okay. Yeah.

Okay. Uh but even with 60 70% then that will need some sort of manual review and intervention one by one. Review all the resumeums one by one. If has not been uploaded that will be for me. I have to skip the profile and go to another one. That makes sense.

Um is there any anything else in ter like I know we talked uh about the you know the job acquisition creation any other friction points you you see on that at the moment like it sounds like there's obviously the approval process is is and the reporting process is quite uh quite manual at the moment.

I would like to add one part because once the candidate selected and we have to reach the offer there is an option of uh pan ahar UN numbers government have yes these three options actually it's not always active so once the candidate accept all the policies suddenly it vanishes so candidate does not have that option to go again and edit the government ids okay

at least right now the PP policy is that you need to have all three IDs before an offer can be extended

so it will not let you do that but it also doesn't mark it as mandatory so the candidate will upload one ID and then they they're free to move forward. There's not stopping them but it will stop us to release the offer. You have negotiate multiple times and about three days.

Yes. For three days and that also the timeline right you have to wait for them and that happen you have to do twice or thrice so that because work day when they when you as a user in your system and the system is not asking you for it's asking you for one you do one you'll move on.

Yeah.

Um but then You have to do it again and then the third time

and I candidates on daily basis it's choking my bandwidth guide them you can imagine that has a knockdown effect then towards the end of the process

do you do you know um so the amount of candidates that you lose because this process is taking so long maybe they find a job elsewhere do you have any of that insight into their yes they have um yeah join you should probably write specialized for specializ sit at about 82 83%. Which is where which is like we're losing about 16 17% people who are in the time that it takes for us to release the offer for them to accept it and then for them to join between that time period they've already found that and a lot of people

drop out before they even accept our offer because process is so they have to do it twice four times same office they're accepting because they forget to you know they don't have to upload the ids to the first

yeah some candidates were anxious about that why they doing so many steps on that and also to add this I don't think whether it's a technical glitch or not you guys are facing it or not there are times when candidate come backs and say that so there is a option wherein uh they get a OTP right on their mobile phones which is linked with the Aadhaar card right so there are multiple times where candidates come back and say that we are not even receiving the then you have to raise a ticket on work day and then back in we'll do something the very hctic for data to come back to us.

Okay. Okay. Um is is that something just just curious is that something that's been raised through workday support uh at this stage?

Sorry, I didn't get your question.

Oh, sorry. Is that like that sounds like it's probably not uh working as design behavior? That's something that's been raised through our support team.

Yes.

Okay, perfect. I'll follow up on that.

We we have to go back or the OTPs might not come.

Yes. This was never been told to us, right? It was always a process that OTP will go to the registered mobile phone which is linked with the government identifiers and once the candidate will put that OTP on the workday application that is when he would be able to move forward. Now there are times when candidates are coming back and saying that we are not even getting the OTP.

So what should be the next steps and then again if in case they get the OTP and as she mentioned that they just skip because workday allows them to move ahead right if in case they upload one government identifier but

it has to be as per the SLAs what is being set right the so which are being set that the transate should not be able to move ahead till the time has not fulfilled the entire criteria right until unless there are all the three government identifiers the candidate should not be able to upload or register on perfect

yes okay

right because then it becomes again like a time consuming job for us we puts the identifiers then we say that okay you only put two, there are three right there. Yes. And the other thing is we have to renegotiate the offer letter and and you can understand offer letter is a very very crucial part as compliance and everything time we have to go and read each and every information on the offer letter,

right? We cannot just blindly send it like that because we are just negotiating. There are times when there are technical glitches as well. The addresses gets changed or whatsoever. It doesn't allow you to save the offer letter for for for for like for once right and then we can just keep renegotiating and sending it to the candidate every time we have to roll our eyes completely on the offer letter and it's a pretty long offer letter 14 pages I have a suggestion on offer once the offer will be triggered to the candidate there is a copy of email or anything uh that should be triggered to the recruiter also that we get to know offer has been rolled out

uh also a confirmation notification email or anything like that.

Yeah. Yeah. Yeah. So confirmation is

like for frontline workers there as there's a language

barriers also have times when you're releasing offers for some certain processes where that first language is not English. Yes.

And so for them for us to explain it to them that oh process that you've already done once you have to do again because of this step has been missed that's a big

problem and it's also a time consuming thing and especially for like leadership level people telling them oh you have to do something again

because step is based then that's how we have been reaching directly to uh Katherine and Gail and everyone um and we have been telling them that the candidate whom we are offering is SVT level candidate and cannot do this to and fro and ask them to just keep uploading them and we have taken exceptions right that we will do this later but for now we have to throw out the offer because the candidate is getting really fussy about it What are you expecting out of me

as a senior vice president right with 25 years of experience you cannot expect such people to just keep looking just because we have a technical um bottleneck right yeah you would need that process to be as smooth as possible

she mentioned that there can be a automated email which gets triggered to the candidate on their email ids to which they have registered right that the offer get result because for now what we are doing is we are up our phones if we are calling them please go and check your task.

Yes. Yeah.

Right. And check your task bar. There must be a notification. There will be a bell icon just as you do it on YouTube. Yeah. There will be a bell icon and you have to go back to click on that and then the offer is there.

Yes.

Right. So if it is there and I think this is this is very much an easy task which we can do. Right. Just a automative uh email just as a push notification going in their mailboxes and saying that either the email can say that you have a notification.

Yeah.

Right. Something like that.

Yeah.

I know one thing um we've rolled out in uh recent releases as well um in recruiting has been SMS and and WhatsApp as well. So obviously you can do email notifications but I was just curious in terms of like with the candidates you work with every day would there be a communication preference uh between email and WhatsApp in terms of compliance. by emails.

Yes.

Because SMS and WhatsApp is not something which can be taken into grounds in case there is any any issue. Right. So in terms of regularities in terms of compliance I think email is something ID number is mine

and then another thing is that linked anyways from the workday registration that particular person. So we can have a trail we can have a thread of everything going on that particular thought. Yeah, that makes sense.

Um, yeah. No, again, that was super helpful. I don't know, Robert, if you had any follow-up questions or sweating off because it's getting a little warm in here. I'm like, oh, yeah. Yeah.

Yeah. Yeah. Yeah. Um, no, I mean, just I mean, I just heard some key points about um just, you know, the use of the system, and you're right, it does do a lot more than what you're using it for, but um there may it see then up to us to understand why there probably were reasons why those weren't enabled initially. Um, which is one thing yeah we'd like to understand before say yes you need to do this because um there could been reasons there. Were you on the were you on the implementation team at all or did you help with the implementation?

Okay.

No, I was not there. So I was a part of the implementation uh at the very initial stages and uh but post that wonder process. So I was a part of uh the team where we have created the entire process flow

the design sessions okay

yeah

but uh I think uh post that it was it was bandwidth issues we were not able to get into it like 100% and I have to pull myself out of it um but yes to answer your question I think uh this is this this workday the implementation has come globally right and while this has been happening uh the

teething issues at the ground which is happening that might not happen have been bought in picture right hence I think the requirement of the session is there and we are kind of in trying to improvise that how we can make it better or easier for all of us I don't think any of us will have a answer to your question that why it was not there at the first place and why is now and things fall off too when you you know timelines get past that is when you get to know that what are the hiccups what are the good points right the dos and don'ts and everything So I think now we are in a better place. It's already been some two months we are using this 100%. Right?

Um there was a time when it was happening partially some of the offers were going on our previous tool. Some of the offers were going on verb day when it was not completely functional. But now we are 100% on verb day in terms of only releasing offers. There is nothing second thing for and just on offers do you use e- sign like sign donkey sign? Use donkey sign. Okay. Yes.

Okay. Perfect. How do how do you find that process uh in workday at the moment? Um do you come across any

sign doesn't come as an integrated feature in workday for now right? So how it happens is that the offer is out

uh there is a uh there is a statement which comes from the candidate there is no docu sign right uh they are not supposed to sign any document on work day I think we have we are not giving them that option. It only says that I accept this offer and that comes to us in a tablo format.

Okay.

Right. So we don't give them any option of docu signing that. Exactly. Just an acknowledgement of consent

and then again while we are for our internal compliance and audit things when we do that we have to take a screenshot of that. Okay.

Right. As in proof that the candidates has accepted the offer because there is no option of signing that offer letter is going to the candidate.

Okay, that's just a simple text box where they give their consent and acknowledgement that I accept this offer. That's all.

And then do you have to manually send them a link to the take a screenshot, right? And then you have to send it to our internal articles whoever are doing our internal. So the candidate has accepted the offer including our stakeholders, our hiring manager that so this is that is the only proof what we have

and there is no mail triggered when the candidate accepted our offer.

Yes, we have to go back and check everything. Got it. Okay. Accepted or not.

Yeah. So that that yeah that sounds like could be interesting detail like you know how do how do we integrate that maybe into the into the process

because we create any job requisition we put the primary recruiters there right? Yes.

So a trigger has to go at least to the primary recruiters. It could be either one or it could be multiple recruiters. Right. And it has to have a notification. For now there is only one email which comes to us from one TB at the birthday. Right? It just says that there is a task right and in those tasks we see almost 3,500 tasks because we have the entire recruitment team have access to everything right all the positions right so we see 3500 tasks so that is humanly not possible to just go into that list and check out that what is the task which has just recently got updated.

Yeah, task right success but there is no requisition ID nothing information mention further what has been closed now.

Okay.

I have to wonder what's

so you have to invite me to go through and check which one has been closed. Okay.

Does it mention any job ID or any anything you just gone for the date that it closed that you got the email.

Task can be position task can be maybe I have uh done any team members task. So task can be anything. It's just mentioning closed position successfully completed. Okay.

I'm not sure what is successfully completed.

Positions they only close when you close them. I have 20,000 tasks right now.

They're not mine. All

in some members. So what I'm trying to say is that email should have a relevant content to it.

Yes.

Right. So for now to be very honest what I'm doing is I'm just going on these emails. I'm just selecting them all.

Yeah.

Because these are not helpful to me.

They are only choking my

and positions are never really they're only closed when they're no longer filled, right? You just have an open in a filled position, maybe frozen, but closed means they didn't they no longer exist.

Well, I know. Yeah. Yeah. Yeah. More detail there. But I'm thinking going off the status in your email, which to me is it it's not there's nobody in that position. You don't need it anymore, but it should be filled if someone's sitting there.

One more thing, it's not related to recruitment, but I'm as being a manager, I have to mark my team members attendance. and close to them and it's very complicated because once I done it after one week the change will change you mark them as present one week later you'll check it it's half day missing missing missing hours

fries unpaid everything will come

I cannot mark in one go for a week or so I have to mark each day for my three team members it will take almost an hour

yeah so it all adds up yeah if you're not manual manual processes. Um, just a time check again. I think this is super super useful. Um, um, would you have 10 more minutes more topics really important for us?

Yeah. No, this is this is I could talk to you for hours. No, this is great. Um,

yeah, one followup question. I was curious on the government IDs. So, you have to capture there's three government IDs that have to be captured and if all three are not captured, you know, you potentially have to downstream then renegotiate the the offer where exactly are those are those captured in like not LinkedIn or are they on the careers uh the apply flow for the for the candidate um what specific parts of the process are the government ids just so I offer

yeah
once I submit that offer instead of the offer going to the candidate first the policies go to the candidate

they have to accept those policies the next step is government identifiers

okay so it's a step of the offer process

government identifiers submit that then it comes back to me again.

Oh, this part has been submitted. Now you need to now release the offer and so then I release the offer. It go to them

that they have to accept.

Yes.

So just before the offer release um is the step where you have to accept PP policies as well as do the government identifier and whatever she's saying everything is manual.

Yeah. Trust me we have to be on the phone right oh this is the next step which would have come to you please fill your government identifier then the candidate will call back

and then he will say say that okay I have updated it right now you go and check on your workday then we go on our workday then we say no it is not visible to us and then all that jazz starts right no notification to the

emailates needed to ask we only have to call them not even email is going to where they get to know that there is any notification or there is any task right the way she has shown you an email right a generic email right there is a email or there is a task pending on birth date what task what not little bit of content

so that I can pick up which is relevant to me

and it's the government ID I mean I don't know about you when I get a phone call I don't answer it anymore because I don't who calls I mean

um

yeah

understand senior level they're 25 busy they would not have time for all these transactional things right offers so they are not entertaining our have already offers in hand. They might be offer fishing in the market.

We cannot expect them to wait for our transactional things to become a bottleneck and then we losing on candidates, right? 15% is a huge percentage which she's saying that you have a drop out only because of work.

Yeah.

So it's not only um and for the government IDs, is that just for like a um validation of who they are? Is uh I guess because sometimes it depends on the the the the country and sometimes maybe the company as to when you ask for that identification right because your bank account identification that's usually after the um that's usually during onboarding right the bank account validation but what happens before the offer

yes from employment history and employment uh experience that is an identification related to your bank account. So you have a valid balance.

These are the unique government identifiates identity fraud or things like that to make sure that this becomes a major part of our background verification to check their identities, right? Because these identifiers also have their house address and everything for which they have just like passport but we have different different identif verification because there are a lot of processes especially when you have a plan.

So you're doing the background check is really what you're doing.

Yes.

When you hire they need a complete background verification done before they will let you know this candidates on the floor. So ongoing employment on their time to shorten that thing so I could more often.

I see. Is this the workday meeting?

Yes. Okay.

Then we can come.

And it's the ops interview 12:30 slot.

Uh we 10 minutes. No worries. We'll catch up if that's okay.

Yeah, we'll catch up in like 15 minutes. Would that be okay?

Perfect. Thank you very much. Sorry.

Apologies for the delay.

No worries.

You're doing the background check first and then you're

background check first. They're just trying to shorten that time frame because if they don't do it now, they have to do it after the offer. Yes.

And before the offer, the candidate still you know a little bit interested into it. Once you join, then it becomes a okay, I'll do it later. I have to start.

So I have third party to uh do the background checks and third party gets the data from work day only.

So we have to ask the candidate to put all the mandated documents to get the BGC initiated.

Yes.

Yeah. So all these three including identity, the address and the bank account and employment history. So these are the background checks.

Got they mandatory like can the candidate progress to the next stage without filling out one of those at the moment? Uh those three. So I suppose how how does it get to the stage where maybe two of them are missing. Do they just skip it or actually Bombay allows them?

Yeah, very easily skip that.

Okay. Okay. Okay.

Then you can't progress further than offer.

Yes.

Can't move them to BGC or ready to hire because those tasks are missing.

Gotcha. Okay. Um changing gears slightly just I suppose last topic here from my side and then you know any other any other um challenges you'd like to share. I was curious around the the area of interview management. Is that something that comes into your responsibility or do you have like interview coordinators?

We are doing it by ourselves.

You're doing by yourselves. Okay.

How do you find that process at the moment?

It's not it and interview. Some of the positions we are extending the test assessment test to the candidates and sometime it's a specialized we are doing interview. So

at the right time we are not using workday for interview assessment. But yes the evaluation was written everything is not happen the

helping us currently to release the offers

release the offers

there is nothing there is no other second task what we are doing on

Gotcha okay that makes sense

second would be marking her attendance

yeah and just out of curiosity is that done in another ATS or is it done just completely manually the

the interview part of the process so for the leader team we are doing it on thrive right thrive is

something where we'll keep changing the status of the profiles what we upload there otherwise we

are doing it through teams we are blocking the calendar managers right

and then that is how they're accepting it and and it goes on and all

perfect if the interview will be happen on work day then will be feedback forms we can upload and get the feedback

via work day lot what we can do through work

yes when the so the candidates applying to the workday job career site um are there any uh like are they dis based on how they answer things is it dispositions at all coming into the application um whatever there's no like qualifying answers there no nothing is being like qualified there they just enter there oh we're interested in that question and it go to review got in your candidate in the job you go review and our attention have 600 people on one job because everybody's allowed to apply there's no question there are no filters to be precise now say for an example if I'm looking for 10 years of experience of a person right but two years of experience person can also apply and vice versa as right so there are no filters to it that uh if my experience range is for so and so compensation range is so and so the patient is so and so it is allowing everyone to upload their profile if they have a link or if they go on any of the external sites and get access to that link.

So there is no filtration process.

Okay. So a candidate I can just apply to every single job at TP if I wanted to.

Okay.

And but it's up to you to determine whether or not I'm qualified for it.

Okay. Yeah. Got it.

Question to I suppose the the offer process and also the job wreck h creation process. Do you use AI at all to assist with with aggie parts of those process processes right now? Or is it just completely manual?

Completely manual.

Okay. Okay.

But it's also like it's all codes that you have to be especially the job acquisition creation part.

It's all ports you have to enter and it's all it has to be specifically that designation. Yes.

I can't put something that I want or I can't it can't it cannot be anything else

that specific designation there's not very specific you can't like just write whatever

a filters the resume that would be the relevant ones

that would help. Okay. Okay.

I think we have like other you know platforms that those are happening at but

yeah I think that was something um I think something yeah Iris Iris mentioned as well in terms of you know

so we have no.com portal.

Yes.

So their AI helps us when shortlisting the candidates.

Okay. So before it gets into work day there's uh so yeah

which right now interview.

No, but you can also Yeah, but you can also do your principal short list now. You upload your JD, you upload your profiles and then short list which you can align the interview.

Yeah. Yeah, I think that was Yeah, that was something I had mentioned that kind of pre-screening stage like it sounds like there's an internal solution for that. Um I didn't have any other questions. I just wanted to open up to yourselves. So I think we covered a few topics there in terms of um a couple couple of critical user journeys. Are there any other challenges that are top of mind or any other friction points that are top of mind?

Yes, the other point which I would like to bring on the table is the reference are completely scattered right. Uh we we are not able to access reference through workday. I don't know if it's the same for you and I can ask to share the candidate ID. So I can download the whole of report all the a bifurcation in terms of what years of experience and what those things are right until unless I don't have a targeted person right like you would referred Robert I have to search by his name right and then I will end up having 10 Roberts and then again I have to deep dive to understand that whether it is the relevant Robert which is being referred by you or not right so we don't have anything like that which is

there currently reference is completely scattered

okay so the referral so like um if I wanted to refer um um like David to TP and I work at TP. I can't I don't I don't go into workday and say, "Hey, I have this great candidate, David. Here's his contact information."

They don't you don't do that.

That the resume

and it will generate one unique candidate ID. So, you can share that candidate ID with me as a recruiter. So, I can easily fetch on David's profile.

But does David um if I know which job requisition he's applying for,

I can't I can't apply I can't I can't refer him directly to that job wreck.

Yeah, you can refer job to the JD whatever is the relevant one you can upload David's profile there.

So I can easily go through it.

Okay.

Yeah. But again you have to as a recruiter I have to first post that job interview. Yeah.

Right. Only then will you be able to

Right. Right. Yeah. You can't refer somebody to someone that posting.

Okay. And um I suppose to your point then Robert refers me. It sounds like it's it's a manual process to find find me and the system should be able to find you.

Okay.

Because I should go to the geography.

Yeah.

Yeah.

Okay. Yeah. Because the recruiter should be notified of assigning to different different position. If I'm assigned to particular position then he has to refer on that.

Okay.

And also I need to understand for workday functionality do we have option of posting internal uh posts uh within workday. Can we do that?

You can post internally first and then you can set it up to say on you know on this date then repost it externally.

I think that the entire fraternity of DB

um I don't know how however it's set up but um I think so.

Yeah,

it's the internal career site.

Yeah, it's the internal career site

because you should have filters on your internal career site saying I'm only looking for jobs in India or where else. You could and then okay then these are the jobs that are there internal and you can apply to them but then after a certain amount of time it can go external as well.

Yeah and obviously that confidential job right so we respect security around that no I yeah that's what I wanted to check that only pertaining to confidential job requisition as I mentioned it will not be visible to all the recruiters right no dire HR team it will be only visible to 8 to 9 people those who have access or rights to access that.

Yeah.

So I need to understand that can we do this uh for confidential job requisitions you can come back on this?

Uh yeah I can maybe I could confirm that for you but yes absolutely I think for confidential we should respect you know security permissions.

I would like to see the process flow as if in case it is posted right how is it coming to the other people how are they having a view of it. Again as an uh email which just says that you have a notification or it is going to them that this is the job posted for uh a leadership role right in between TP and if you have any references you can source here I also need to understand or have a view from the other side of

what's their experience yeah

do you do you require um all employees to uh apply for the job through recruiting or can they just hire them directly into the position? Can they be directly into a position

IG internal job. No, we are not talking about that. I'm not talking about internal just in general. Okay. There I can promote my confidential job requisitions and invite applications through people like us right or through people those who might have anyone right a vice president sitting u uh within within the system right and say for an example I have a generic operations position and I know the people those who are at the top layer would be able to help me right and then they are having that prompt that the leadership team has so and so position and that is when they are referring someone to us right that's that's and I and as I mentioned I would like to see the process view that how it is uh like kind of in coming to them what kind of prompt is coming to them right how to view with them so yeah that that's something we can follow up on in terms of yeah what's that step by step uh view Okay.

So, see to my understanding I'm sure that you you guys are best at it right. Um to start with we should have a proper process flow right a proper mechanism where as a said right and of course you can use other people as well that the positions has to be created by the hiring managers wherein this cost center line of businesses hierarchy and everything is already set at the very first place right and we are saving a lot of bandwidth there right and then u the the uh the hiccups of having those information correctly right is also there as as we mentioned there is a high probability wherein we tend to mention wrong cost centers then creates a lot of problem in because that person gets tacked to a wrong cost center and then the cost gets deducted from when is saying that what's why I'm taking a cost of David when he's not even into my business

yeah yeah billing issues that come up and then they come back for the client of course. Yeah,

especially for the client roles, right? So, uh hiring managers should be creating these rare ids, right? This is this is one. Then second, the approvals have to be on workday. As I mentioned, we can have an entire thread, right? Which can be helping us at the time of audits, at the time of compliance and for our betterment as well, right? As in when the hiring manager creates a position, that position is already approved by the business unit. care, right? And when we have a candidate identified for that particular requisition authority, then before releasing the offer, the approval again goes to either upline or to the hiring manager where he approves the compensation, the proposed compensation

on the tool itself, which is work, right? And then we have for specialized for leadership though because for specialized once the position is approved, the offer will not go for any other appo unless it goes beyond budget. Do you go through an annual um budget cycle like for um like all positions are budgeted throughout the year but then um you have the ad hoc ones that occur outside of that budget cycle

lumpsum like it's not like you these positions are budgeted at that every position that comes to me every single one comes with a budget range

okay

so it's not a lump sum only 10 positions are budgeted like this it's position by position budget differs so that's why I saying offer will not go for approval. Um because it will probably always lie in your budget.

Yeah.

Yeah. But for confidential requisition, so it hiring uh we we need this process to be designed like this.

Okay. So I think just I suppose to circle back on, you know, the critical pieces, the hiring manager being able to create the job, right? The data flowing into that correctly that you don't have to go back later on and renegotiate things later. Approvals being in workday uh you know being very important. Um and beyond that though what what would the you know the next most important thing

the name parsing

resume paring

yeah looks

and bulk up both yeah I mean yeah we talked we talked about that and even yeah it's even if it's only 60 or 70% if if we could get that closer to 90 95% that's going to you know prevent a lot of manual work as well if that makes sense.

I also have a you know condition about uh the onboarding journey.

So um because that is something that is a part of my u you know KPI given

so because the so what happens is once a person joins say I create the workday ID joining minus 2 days right

and so they're able to do that on boarding um completely with the temp password and all those things but once I create the job uh the workday ID on the day of their joining they can't do that because uh then they need their official email ID and all that okay

the issue comes if they drop on day one or day two and I I'm supposed to mark them as no show right

I can't do that because those onboarding tasks are incomplete a candidate who has dropped is not going to come back and complete those onboarding task right

but I can't mark them as no because it shows oh these steps are incomplete you can't mark them show so I have to go and tell the hiring manager to mark them as attrition now the hiring manager is I you know their problem is that this person has never joined

why do I take this attrition under me

which is It's a big big problem because blocking

it's a lot of back and forth that happens there

and even if the person is completed the onboarding then issue comes over these steps are successfully completed we can't show

wait are you are you using the no-show business process when you do that how are you marketing as no-show

so uh when you push to payroll yeah once the person has joined similar you can mark them no show that this person never actually joined on boo yeah yeah it's like person who whose work day ID we created because the person was supposed to say join tomorrow or today but day one day two they don't show up you mark them as no show because otherwise they'll be they'll become a part of the but you're going you're using the no-show business process you're not doing some other yeah

okay okay

so because their onboarding steps are incomplete but obviously incomplete come and then Even if it's complete onboarding then also it's not letting the market know because all these steps are completed.

Yeah.

You have to delete them.

So in either of your cases and then the business heads have a problem that oh this is increasing our attrition.

Got it.

People are not even joard I it makes sense but I've never heard that scenario before. I've always thought of like termination as like a um out of order transaction but

I never thought of no because that's at the beginning usually we hear at the end like the termination's blocking things from happening.

Um No show is doing during the

talking about three hire. Yeah. Yeah. I was just curious like what percentage of become no shows or what percentage of successful offers become noshows then that that don't show up on the first day like very

specialized about like maybe five six%.

Okay.

Yeah. Uh who become no show. But also in terms of numbers when you have we have like what 2500 joiners a year. So that 5% is also not a small number.

Yeah. Yeah.

So that and that if that count as a aed headcount then for business that's a problem.

Yeah. Having to go through. Yeah. And I suppose for

that's showing up as attrition which probably impacts reporting is something which becomes the major KPI of any for yeah their KPI because that percentage reflects in that matrix got

so I think it's a very major thing that makes sense

sure

it's related to onboarding

I'm just out of curiosity do you use uh I know we uh do you use like workday for on boarding uh at the moment I know we have like an onboarding

yeah you have to

experience

yeah you so once a person has joined you have to go back and complete the onboarding steps which includes uh entering their bank account details

and all those things and if you don't do that then you're not a part of the payroll because

yes

you can't

okay

so use the pre the pre-on boarding and then they the no show so happened and they can't get rid of it because those pre-boarding ones are out there step there yeah

um the other thing I captured I think were the government IDs I think that's yeah that's the three identifiers that you mentioned

um was there anything else or I'm just very conscious your time. So want to want to let you go. I think I'm good.

Yeah, this was very enlightening actually. Thank you.

Super super interesting. So again, yeah, we'll synthesize all that.

Please do. Yes,

I think because I use work there a lot of tasks. So I so one of the task is assigning to pay group, right? And so on joined successfully, we need to make them a part of payroll and so we need to assign them a pay group. Um but what happens is sometimes you assign them to the paper but when you so we have a order generated report that comes to us oh these people are pending to be assigned to paper

and there are some 15 20 people who are always pending even though we've already assigned them multiple times

and so when we raised the issue with the work team and all that so they told us that if if there are some changes happening uh to that employee say location or designation or xyz things it reverts back on that day and so you have to push them for payroll again but that's a problem because I There might be changes to location or education or anything multiple times during your employees tenure, right? And we can't keep pushing them to payroll every few days. And there's rules that you set up to assign the paper, but sometimes if they're um ambiguous, the system doesn't know, but it's not like if they get assigned, then you go back and change something that may impact the rule. Um but we'd have to look at the re if it how it reassigns those if it's actually in that step or something. So um but that's Yeah. But that happens for and yeah they're always pending for signed pay and then every payroll cycle the payroll team will send us an email saying that oh these people are not assigned to payroll and we have already assigned them I don't know how there's a lot of defaulting that happens in the system but if there again if there's any ambiguity um it it won't make the decision for you um right

um it dep there might be some steps in the BP that says go back and reevaluate the pay group um and in that case it may like reassign it. So I I'd have to look at your BPs and all that fun stuff. But but that's that's yeah because it's not consistent with everybody then that tells me there's something happening where the system can't determine what the pay group is. Um but is there a way to uh enforce the system to re-evaluate what the pay group should be and reassign it so it doesn't go back to peril?

Yeah.

Right. So I'm not sure what would be the same for everybody.

It's the same exactly same for everybody. It's not Yeah. It's not like centers or bidding associated. It's just a way to tell the pay billing teams. Oh, is this person supposed to be a part of the payroll or not?

Oh, okay. You have one picture.

One pay.

So, I'm not sure.

Okay. I don't know what the issue is then. But yeah, it should it should it should be relatively easy and and your all the costs and things should be defaulting from like the supervisory or that will cover maybe 80% of those hires. And so, a lot of that could be cleaned up as well. But I don't know if

you're using default or assignments or not, but That's one of the key words. You may want to throw that out there. Reusing default or assignments. Um, but yeah, so there's a lot of things that we could we've heard today that we could actually, you know, as we mentioned earlier in the conversation, there could be some uh configuration quick fixes which we can make suggestions and then there's also maybe some um potential um software enhancements. But again, that's really that's those are major things. These are easy things that you know that we'll share back with the team for the larger teams.

Things that I'm sure if anyone has highlighted that to you or not as we did that I don't know for what all reasons so now say for an example I for the last week right I marked my entire attendance for Monday to Friday right now if I will go back and visit my attendance for last week it'll be all messed up

yeah

oh

it'll be all messed up yeah we've already mentioned that

and so this is this is a recent thing which has happened 28th of November my manager calling me and saying that would be work day only shows that you you were 17 days present. I was like how is this possible?

I marked my attendance just 2 days back because the pay cycle is 21 to 21 right

so I just finished that on 25th of November um considering that of course the pay would have started by now

and on 28th you were saying that it's only showing 17 days present for me then I have to do that again right and everyone will not have that chance and just imagine the people who have reportees under them right They are doing it for their multiple reporties right and then again for the next week they are going back and doing it again and you have to do day by day you can't like select the whole week or the whole month and for six people under me and myself

selecting attendance for every day and then it goes back to you know all messed up it's a big big pain point and then it affects like people's salary it will not come the whole amount or you know people have deductions or whatever because of the salary.

Okay.

Yeah. This is one of the major bottlenecks for us.

Yeah. Yeah.

Apart from the creative

again that's something we can take away in terms of is that something around configuration is that like a is that a bug you know I think that's something we can

I think phases right we can pick phase one as an area of improvement for any xyz thing then we can move in and once we are all sorted in phase one then we can move to phase two and we can see that what are the now things which are left out of right and then we can have those 100% accurate and then we can move on to phase three because if we are assuming that everything will get sorted at one time because I I'm sure parsing CVS is something which is not that easy following al together right it is definitely going to involve a lot of intrications and your
